Let's adjust your app a little bit!
By adding this to the top of your code

```
import SwiftUI
import SwiftData
```

Now, let's go to your data structure, and refine it like this

```swift
@Model
class Favorite: Identifiable {
    let id = UUID()
    var name: String
    var image: String

    init(name: String = "", image: String = "") {
        self.name = name
        self.image = image
    }
}
```
