It can apply this way too!

```swift
struct Person: Identifiable {
    let id = UUID()
    var name: String
    var age: Int
}
```

We're creating a data structure of a person

Every person have their own unique ID Card number!
So we have ID variable

Every person have their name, and age! Therefore we have name and age variable

Think, Pair, and Share in breakout room

```swift
struct Person: Identifiable {
    let id = UUID()
    var name: String
    var age: Int
}
```

Create another data structure for other type of data
